

DSS Mk15

automatic rifle

Mk15 is an automatic rifle fully developed and manufactured in the Czech Republic. Its design is based on the proven AR-15 platform, renowned for its excellent ergonomics, intuitive control layout, and high reliability under all conditions. Thanks to these features, the Mk15 is an ideal choice.

The upper and lower receivers, along with the handguard, are precisely machined from high-quality aerospace-grade aluminum using CNC technology, providing a perfect, play-free fit and maximum structural durability. The surface is treated with a hard black anodized finish, increasing resistance to wear and corrosion.

The handguard features four MIL-STD 1913 Picatinny rails, with the top rail seamlessly aligned with the upper receiver, allowing for stable mounting of optics and accessories without interruption. The rifle comes standard with folding iron sights of in-house design, made from durable aluminum and fitted with fiber optic inserts, allowing for emergency aiming even when folded. A single-point sling attachment is also included to enhance carry options and mobility.

The rifle is also available in a version equipped with a refined gas piston system with automatic pressure regulation, ensuring smooth and reliable operation even during extended and intensive firing.

Features:

| | |
|---------------------|--|
